Common Activation Functions

Sigmoid activation function converts the weighted sum to a value between **0** and **1**.

$$F(x) = \frac{1}{1 + e^{-x}}$$

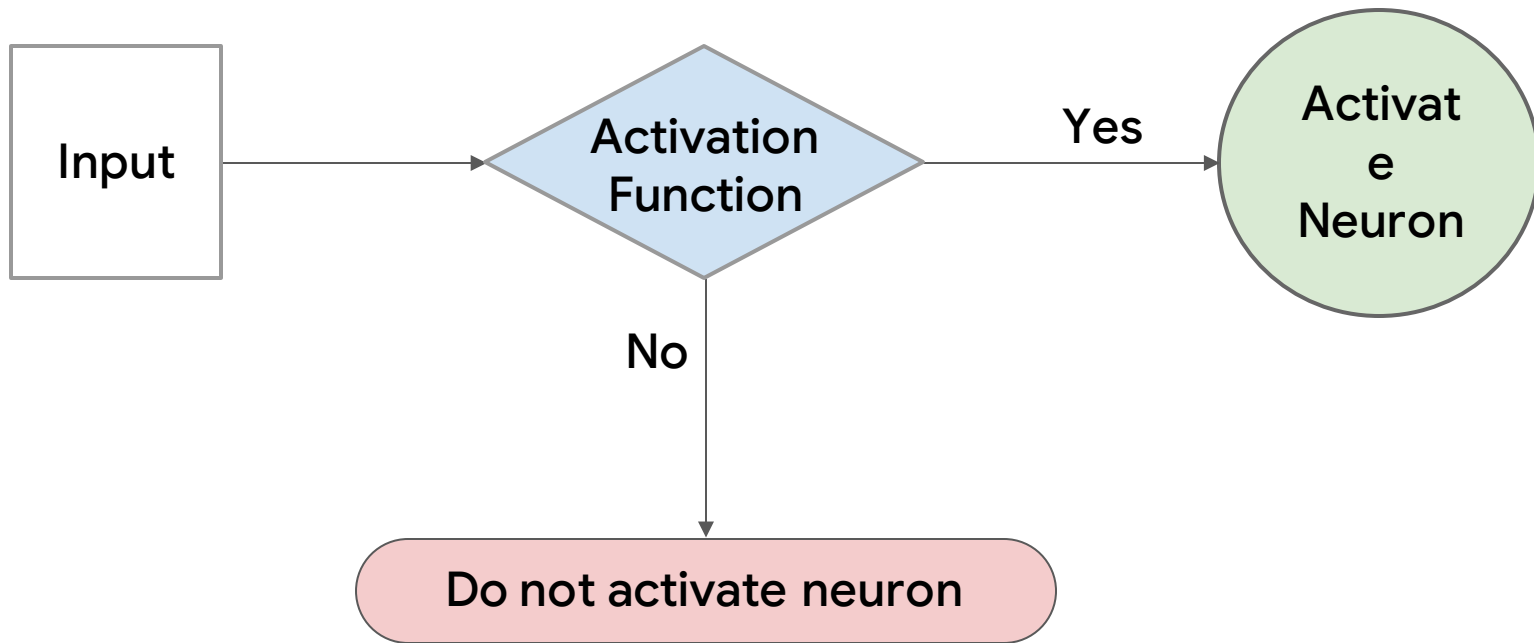

ReLU (Rectified Linear Unit) activation function often works a little better than a smooth function like the sigmoid, while also being significantly easier to compute.

$$F(x) = \max(0, x)$$

Perception of Artificial Neuron with ReLU

FEATURES

Which properties do you want to feed in?

+ - 2 HIDDEN LAYERS

+ -

4 neurons

+ -

2 neurons

The outputs are mixed with varying **weights**, shown by the thickness of the lines.

This is the output from one **neuron**. Hover to see it larger.

OUTPUT

Test loss 0.500

Training loss 0.508

Colors shows data, neuron and weight values.

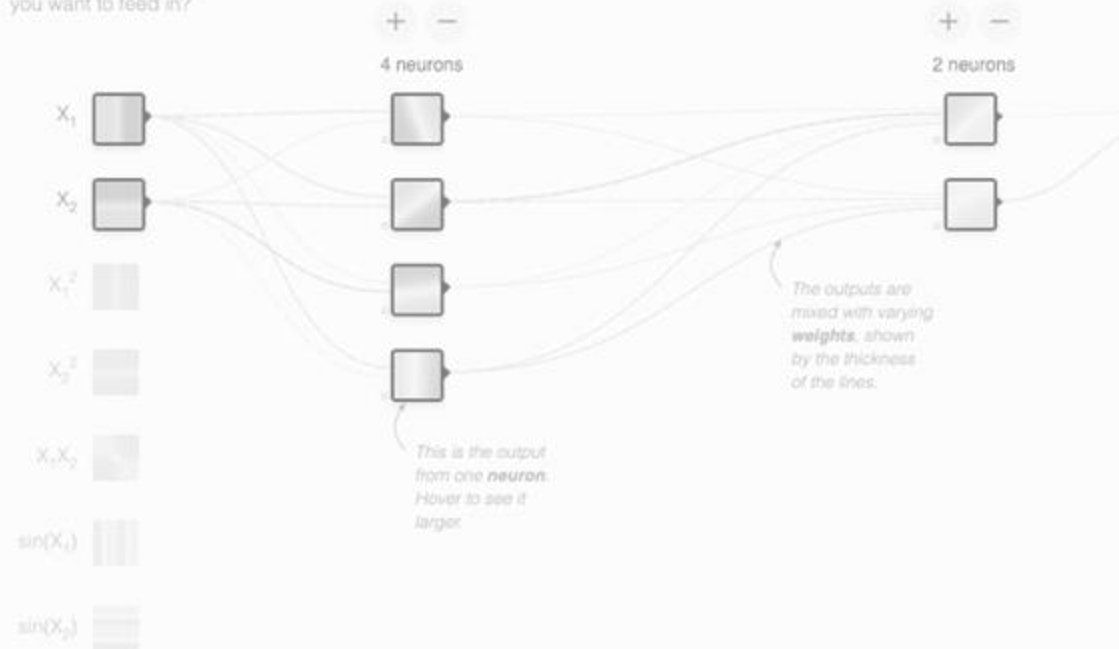

☐ Show test data

☐ Discretize output
